

George Njau: Quality Without Compromise

The Remote QA Leader Your Engineering Team Needs

In a world where software bugs cost businesses millions and user patience is measured in seconds, your quality assurance strategy isn't just important—it's everything.

What if you could reduce regression testing time by 70% while improving deployment success rates from 82% to 98%?

I did exactly that, and I did it by leading remote teams across multiple time zones.

Why Your Remote Team Needs Me

As a QA Engineering Manager with 7+ years of experience building high-performing remote teams, I offer:

- ✅ **Proven Remote Leadership:** Built and managed a team of 12 QA engineers working across different countries with 90% retention rate
- ✅ **Automation at Scale:** Implemented test automation frameworks that reduced critical production bugs by 65%
- ✅ **Data-Driven Quality:** Designed ETL pipelines processing 2TB of user data daily to identify quality patterns
- ✅ **Process Transformation:** Reduced testing costs by 40% while maintaining rigorous quality standards
- ✅ **Cross-functional Collaboration:** Bridged development, product, and executive teams to align quality goals with business outcomes

Remote Work Is In My DNA

Quality assurance isn't just about finding bugs—it's about preventing them from happening in the first place. In my previous role at Appcues Inc. (fully remote position), I helped the company achieve:

- 80% automation of Chrome extension testing
- 75% reduction in bug escape rate
- 40% improvement in feature delivery time

All while working asynchronously with team members in different time zones.

Let's Talk

Your product deserves quality that scales. Your team deserves leadership that empowers. Let's connect and discuss how I can transform your QA strategy from wherever I am in the world.
